### CS520 Theory of Programming Languages Introduction

Hongseok Yang KAIST How to analyze programming languages (their constructs, type systems, implementations, etc) scientifically?

Our goal is to study mathematical tools for such analysis.

# Preview 1: Abstract syntax

What kind of syntactic object is a program?

# Preview 1: Abstract syntax

- What kind of syntactic object is a program?
- Bad answer: a sequence of characters.

# Preview 1: Abstract syntax

- What kind of syntactic object is a program?
- Bad answer: a sequence of characters.
- Our answer: an instance of an abstract syntax.
- Mathematically, an element of an initial algebra.

```
>>> def F(g): return g
...
```

Which mathematical object does the program F denote?

```
>>> def F(g): return g
...
```

- Which mathematical object does the program F denote?
- Identity function in [D→D] for some D.

```
>>> def F(g): return g
...
>>> F(F)
<function F at 0x10c573410>
```

- Which mathematical object does the program F denote?
- Identity function in [D→D] for some D.
- But D should include [D→D]. Impossible if D is a set.

```
>>> def F(g): return g
...
>>> F(F)
<function F at 0x10c573410>
```

- Which mathematical object does the program F denote?
- Identity function in [D→D] for some D.
- But D should include [D→D]. Impossible if D is a set.
- Possible if D is a domain & [D→D] has only continuous fns.

## Preview 3: Evaluation order

```
>>> def f(x): return
(x+x)
...
>>> f(f(3))
12
```

Should we compute f(3) before applying f to f(3)?

## Preview 3: Evaluation order

```
>>> def f(x): return
(x+x)
...
>>> f(f(3))
12
```

- Should we compute f(3) before applying f to f(3)?
- Yes. Eager evaluation. Python, OCaml, Scheme, etc.
- No. Normal-order evaluation or lazy evaluation. Haskell.

## Preview 3: Evaluation order

```
>>> def f(x): return
(x+x)
...
>>> f(f(3))
12
```

- Should we compute f(3) before applying f to f(3)?
- Yes. Eager evaluation. Python, OCaml, Scheme, etc.
- No. Normal-order evaluation or lazy evaluation. Haskell.
- To be analysed via operational and denotational semantics.

# Preview 4: Type system

```
import typing
from typing import Callable

def twice(f:Callable[[int],int], x:int)->int:
  return(f(f(x)))
```

Types help develop correct programs.

# Preview 4: Type system

```
import typing
from typing import Callable

def twice(f:Callable[[int],int], x:int)->int:
  return(f(f(x)))
```

- Types help develop correct programs.
- Can we infer types automatically?
- What mathematical objects do types denote?

# Preview 4: Type system

```
import typing
from typing import Callable

def twice(f:Callable[[int],int], x:int)->int:
  return(f(f(x)))
```

- Types help develop correct programs.
- Can we infer types automatically? Type inference algo.
- What mathematical objects do types denote? Partial equivalence relation.

- Predicate Logic (Ch1).
- The Simple Imperative Language (Ch2).
- Program Specification and Their Proofs (Ch3).
- Failure, Input-Output, and Continuation (Ch5).
- Transition Semantics (Ch6).
- An Introduction to Category Theory (Tennent Ch8).
- Recursively-Defined Domains (Tennent Ch10).
- The Lambda Calculus (Ch10).
- An Eager Functional Language (Ch11).
- Continuation in a Functional Language (Ch12).
- Iswim-like Languages (Ch13).
- A Normal-Order Language (Ch14).
- The Simple Type System (Ch15).

#### **Imperative Languages**

- Predicate Logic (Ch1).
- The Simple Imperative Language (Ch2).
- Program Specification and Their Proofs (Ch3).
- Failure, Input-Output, and Continuation (Ch5).
- Transition Semantics (Ch6).
- An Introduction to Category Theory (Tennent Ch8).
- Recursively-Defined Domains (Tennent Ch10).
- The Lambda Calculus (Ch10).
- An Eager Functional Language (Ch11).
- Continuation in a Functional Language (Ch12).
- Iswim-like Languages (Ch13).
- A Normal-Order Language (Ch14).
- The Simple Type System (Ch15).

#### **Imperative Languages**

- Predicate Logic (Ch1).
- The Simple Imperative Language (Ch2).
- Program Specification and Their Proofs (Ch3).
- Failure, Input-Output, and Continuation (Ch5).
- Transition Semantics (Ch6).
- An Introduction to Category Theory (Tennent Ch8).
- Recursively-Defined Domains (Tennent Ch10).
- The Lambda Calculus (Ch10).
- An Eager Functional Language (Ch11).
- Continuation in a Functional Language (Ch12).
- Iswim-like Languages (Ch13).
- A Normal-Order Language (Ch14).
- The Simple Type System (Ch15).
   Functional Languages

#### **Imperative Languages**

- Predicate Logic (Ch1).
- The Simple Imperative Language (Ch2).
- Program Specification and Their Proofs (Ch3).
- Failure, Input-Output, and Continuation (Ch5).
- Transition Semantics (Ch6).

#### Math tools

- An Introduction to Category Theory (Tennent Ch8).
- Recursively-Defined Domains (Tennent Ch10).
- The Lambda Calculus (Ch10).
- An Eager Functional Language (Ch11).
- Continuation in a Functional Language (Ch12).
- Iswim-like Languages (Ch13).
- A Normal-Order Language (Ch14).
- The Simple Type System (Ch15).
   Functional Languages

### Course webpage

https://github.com/hongseok-yang/graduatePL18

Primary source of information about the course.

### Blackboard lectures

- Nearly all the lectures will use blackboard, not slides.
- My handwritten notes will be available in the course webpage.

### Evaluation

- Final exam 40%.
- Homework (4 to 6 problem sheets) 30%.
- Two critical reviews 30%.

### Evaluation

- Final exam 40%.
- Homework (4 to 6 problem sheets) 30%.
- Two critical reviews 30%.

### Critical reviews

- Read an assigned book chapter or research papers.
- Write a review (up to 3 pages).
- Try to go beyond simple summary your own thoughts, connection with other PL concepts, or further in-depth study.

### Review assignment 1

- Deadline: 26 Oct (Friday). By midnight.
- Material: Chapter 7 of our textbook.
- Topic: Nondeterminism and weakest preconditions.

### Review assignment 2

- Deadline: 3 Dec (Monday). By midnight.
- Material: "Monads for Functional Programming" and "Computational Lambda-Calculus and Monad".
- Topic: Monad.

### Teaching staffs

- Prof Hongseok Yang (Lecturer). <a href="https://hongseok00@gmail.com">hongseok00@gmail.com</a>.
   Office hour: 6pm-7pm on Tue at 3403 in E3-1.
- Mr Hyoungjin Lim (TA1). <a href="mailto:lmkmkr@kaist.ac.kr">lmkmkr@kaist.ac.kr</a>
- Mr Hangyeol Yu (TA2). <a href="mailto:yhk1344@kaist.ac.kr">yhk1344@kaist.ac.kr</a>
- TAs' office hours will be announced shortly.

### Schedule change

The following four lectures are cancelled:

6 Sep (Thu), 4 Oct (Thu), 4 Dec (Tue), 6 Dec (Thu).

We will have two additional lectures:

- 1. 9:30 11:30 on 18 Oct (Thu) during the midterm period.
- 2. 4pm 6pm on 30 Nov (Fri).
